Apple-Tree Borer.—Mr. S. Miller states in the Rural World that last spring he wrapped thirty young apple trees with common newspapers, which extend from a few inches underground to a foot above. For applying this wrapping the soil was removed from about the base of the stem, and a cord passed around the stem, and a cord passed around the top of the paper and half way down. The replaced soil held the paper at the bottom. At the end of the season the trees were exam incle and nota borer found in them. A few rods from these trees were others, not thus protected, all of which were infested with borers, and song nearly ruined by them.
